Spring fertilizing should be finished for lawns and shrubs

- **Maintenance/Prune**: Remove brown dead plant material.
- **Plant**: Annuals: Coleus, marigold, purslane, wax begonia, torenia, lantana, moss rose, Vinea.
- **Perennials**: Salvia, verbena, gaillardia (blanket flower).
- **Vegetable**: Tomato, okra, peppers, pigeon pea, sweet potato, eggplant, lima beans
- **Watch for**: aphids, caterpillars, mites, slugs, nematodes, white flies and grasshoppers
- **Lawn**: Reseed, sod, plug
- **Vines/Ground Cover/Ornamental Grasses**: bromeliads, asiatic jasmine, Lily turf, ivy for shady areas
- **Shrubs**: Try air-layering crotons, lychee and guava. Inspect plants. Use insecticidal spray on gardenias, hibiscus and other pest prone plants.
- **Water**: Water new plants frequently. Best to water when first inch of soil is dry to touch-1/2-3/4” every 3-5 days.
- **Fertilize**: Annuals and vegetables.
- **Trees/Citrus**: Water 1-2 times/week for young citrus and new trees.
- **Tropical/Temperate Fruits**: Water 1-2 times/week for new or young trees.
